Server_43.md 4/19/2023

S1. 前端 theme (html, css)

S2. 提供相關的SQL指令,顯示如何將theme 內data放入資料庫中

```
JS blogData2_xx.js X {} blogData2_xx.json
                                                         JS BlogsStaticPage_xx.js
id: 1,
img: '/images/photo-1.jpg',
                     remote_img:
                        'https://uuajoijttulpqajssxwg.supabase.co/storage/v1/object/public/images/card_demo/photo-1.jpg',
                     category: 'Spider-Man',
title: 'Spider-Man Peter Parker',
                     desc: 'In Earth-616',
                     id: 2,
img: '/images/photo-2.jpg',
                     remote_img:
                    'https://dmnkstwjwvywbbjpyytg.supabase.co/storage/v1/object/public/demo-43/card-43/photo-2.jpg',
category: 'Spider-Lady',
title: 'Spider-Gawn Gawn Stacty',
desc: 'In Earth-65',
x.js
                    id: 3,
img: '/images/photo-3.jpg',
onPag...

                     remote img:
          PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL
```

S3. 測試可以取得資料庫中的資料

Server 43.md 4/19/2023

Kay_Yang 210410543

- S4. 提供 api 路由,可以透過 api 路由取得 json data 以上要以md檔及 git logs 呈現及說明你的實作步驟
- S1. 將前端 theme (html, css),轉成 React components
- S2. 可以透過 server api 取得json資料,放入 React components S3. 可以直接透過 Supabase API 取得React components 所要的json資料 S4. 請加入選單 S5. 請使用 Context API 及 useReducer 來儲存資料 以上要以md檔 及 git logs 呈現及說明你的實作步驟
